

Cheetah Networks gives operators of public and private networks unprecedented visibility into the Quality of Experience of machines and people at the edge of the network.

Actionable Real-Time IoT Network Analytics

Get real-time visibility into mission-critical service delivery experience.

TELECOM NETWORKS

Provide Better IoT Experiences

Cheetah Networks PulseView™ Solution helps telecommunications providers improve IoT Quality of Experience (QoE) delivered over 4G in preparation for 5G.

Improve the QoE delivered by the IoT network with the ability to view and understand the subscriber's experience

Accurately and immediately identify, isolate, and correlate network-related issues occurring in any part of a heterogeneous network, viewed on a single pane of glass

Optimize IoT network infrastructure with unprecedented visibility and real-time analytics

Enhance competitive edge and differentiate service offerings with a real-time QoE dashboard

PulseView™ enables telecommunications network managers to isolate connectivity issues in real-time, identify trends, predict and pre-empt network down-time.

INDUSTRIAL NETWORKS

Stay on Top of IIoT Delivery

PulseView™ helps oil and gas, mining, utilities, and manufacturing companies maintain the reliability of mission-critical public/private industrial IoT networks.

Accurately and immediately identify, isolate, and correlate network-related issues, from the edge to the cloud

Optimize HSE, security, and operations networks with real-time issue reporting and impact correlation across systems

View and understand reliability and uptime across heterogeneous networks on a single pane of glass

Gain instant, real-time visibility on the QoE delivered to machines and people

PulseView™ enables IS/IT and OT departments to observe, experience, and analyse in real-time the QoE delivered over IIoT networks.

ENTERPRISE NETWORKS

Improve IoT System Reliability

PulseView™ helps enterprise CIOs deliver the best possible IoT network performance and reliability based on the highest level of visibility.

Improve Quality of Experience for people and machines with unprecedented visibility into the entire network, from edge to cloud

Isolate connectivity, congestion, and network supplier issues in real-time

Predict re-occurring connectivity issues and proactively prevent repeat occurrences

Support the evolving IS/IT architecture with comprehensive and insightful data about the network, from edge to cloud

PulseView™ enables CIOs and service-delivery departments to observe, experience, and analyse in real-time the QoE delivered to people and machines.
